Dear Hiring Manager,

I am writing to express my interest in the Senior Software Engineer position at your organization. With over five years of hands-on experience in backend development, cloud infrastructure, and scalable API design, I am confident in my ability to contribute meaningfully to your technical team.

Currently, I work at TechBulls Softech, where I design and deploy Python-based microservices for enterprise-scale data integrations using Google Cloud Platform, RabbitMQ, and event-driven systems. I have also worked with teams at Infrrd.ai and Tata Technologies, delivering full-stack solutions, optimizing cloud deployments, and building robust REST APIs across industries like fintech and PLM.

My core strengths lie in:

- Python (Django, Flask, FastAPI)

- Cloud technologies (GCP: Cloud Run, Pub/Sub, Spanner)

- Asynchronous architectures (Celery, RabbitMQ, Solace)

- Relational and NoSQL databases (PostgreSQL, MongoDB)

- CI/CD, containerization, and a strong testing mindset

I value clean, maintainable code and am passionate about continuous improvement, automation, and solving real-world engineering problems. I take pride in collaborating with cross-functional teams and translating business goals into technical outcomes.

I would welcome the opportunity to contribute to your team's growth and innovation. Thank you for considering my application. I look forward to discussing how I can bring value to your organization.

Warm regards,

Akash Gondhale
